01 THE IDEA

in & out, open & close — both at once

This home is designed around one deliberate contradiction.

Every boundary that matters can be opened, and every one of them can be closed. The great room flows into the deck through one line of sliding glass; the pods sit behind curved screens with open portals; each suite opens to its own terrace through full-width sliders; even the parents’ dressing room is closed by a leaf of glass that disappears into the back of a cupboard.

So is the deck inside or outside? It is glazed, cooled and floored in the same boards as the great room — but it is grass, a fountain and open planting at the rail. Is a pod open or private? Its glass curves around you, but its doorway has no door. The honest answer, until you look, is BOTH —

a Schrödinger’s home: in and out at once, open and closed at once, and it only settles when you decide which you need that hour.

Nothing here is a corridor, nothing is a dead door, and no room has only one way to be used. Close everything and eight rooms appear. Open everything and there is only one room, fifty metres of it, with a tree at each end.

02 THE PLAN

the whole floor to scale — dimensions in millimetres, every column and shaft honoured

02 THE PLAN

the whole floor to scale — dimensions in millimetres, every column and shaft honoured

total of named rooms 232.5 m² (2,503 sq ft) — the architect's DXF version of this sheet carries every layer

03 THE MATERIALS

the same floor, dressed — oak, stone, grass, glass and warm light

timber where you sit, stone where water runs, grass where the sky is — and the fourteen red columns the whole plan honours

04 GREAT ROOM

the heart — with the deck, one room

from the working plan — true to scale

- One room from the gallery arch to the parapet: the party wall between the two flats is gone, and the great room, the deck and both pods read as a single 95 m² (1,020 sq ft) heart.
- **The seating**
A 2-seat recliner sofa with a tree growing off its west end, a single recliner, a rocking chair and an armchair — all centred on a hand-shaped rug, every seat within 1.7–3.3 m (5'-7"–10'-10") of every other for one conversation.
- **The console**
Behind the sofa, 1600 × 350 mm (5'-3" × 1'-2"): one lamp, two succulents, books and a bowl. The lamp is one of the three low lights that hold the room in the evening.
- **The floor**
The same 190 mm (7½") timber boards run from inside the room, under the glass line, out across the deck — the floor refuses to admit where in ends and out begins.
- **The apse**
You enter through an arched portal in a semicircular sweep — crown at 7.5 m (24'-6") on the axis — flanked by two art-deco wall sconces at the centres of the two arcs.
- **The pods**
Both pods stand behind curved glass screens with open portals — no doors anywhere on the main floor.

04 GREAT ROOM

standing in it — indicative, drawn from the plan’s own geometry

STANDING UNDER THE ARCH, LOOKING NORTH — THE SEATING, THE GLASS LINE, THE DECK AND THE FOUNTAIN BEYOND

indicative illustration — generated from the plan geometry, not a photograph

FROM THE DECK GLASS LOOKING SOUTH — THE CONSOLE, THE APSE AND ITS TWO SCONCES

ACROSS THE SEATING GROUP FROM THE WEST PORTAL

05 ALL-WEATHER DECK

in but out — glazed, cooled, planted

from the working plan — true to scale

- A 15.4 m (50'-7") long, 2.6 m (8'-7") deep all-weather deck — air-conditioned, glazed, with a retractable glass roof. It is not a balcony off the great room; it is the great room's north half.
- **The fountain**
A marble fountain, 980 mm (3'-3") of water, on the exact centre of the home. Every main seat faces it.
- **The recliners**
Two 2-seat recliners, 1600 × 900 mm (5'-3" × 3'-0"), backs on the two retained voids, facing each other across the fountain — with side tables at their free arms.
- **The spa**
A 4-seat spa, 1750 mm (5'-9") square, sunk in the east grass bed; the all-in-one gym, 1200 × 2000 mm (3'-11" × 6'-7"), stands in the west one. Real grass grows under both.
- **The planting**
A 340 mm (1'-1") planted strip runs the whole parapet under a trellis — greenery at the rail, fourteen floors up.

05 ALL-WEATHER DECK

FROM THE SPA END LOOKING WEST — THE GYM FAR, GRASS BOTH ENDS

indicative illustration — generated from the plan geometry, not a photograph

06 ENTRY GALLERY

a drum of wood, doors that slide on the arc

from the working plan — true to scale

- The entry is a U of 230 mm (9") walls built on the two columns, 3220 mm (10'-7") wide and 3260 mm (10'-8") deep, closed by a semicircular apse.
- **Curved doors**
The doors into the home slide along the arc itself — drawn shut they complete the circle, drawn open they vanish into the wall's own curve.
- **The console**
On the west leg, 1400 × 450 mm (4'-7" × 1'-6"), corners eased, mirror over — keys, letters and one lamp.
- **Two chairs**
On the east leg, 700 × 750 mm (2'-4" × 2'-6") each — a place to put shoes on, or for a guest to wait in comfort.
- **The sconces**
Two wall-mounted art-deco lamps at the centres of the apse arcs light the arrival — the first of the home's low, warm evening lights.

06 ENTRY GALLERY

STANDING AT THE FRONT DOORS — THE ARCH INTO THE GREAT ROOM, SCONCES LIT

indicative illustration — generated from the plan geometry, not a photograph

07 KITCHEN

one working room, hatch to the table

from the working plan — true to scale

- One working room of 11.7 m² (126 sq ft), kitchen and utility together, with the dry balcony as its service end.
- **The hob run**
Hob 600 × 510 mm (2'-0" × 1'-8") with 45 mm (2") of counter clear front and back; the integrated dishwasher sits exactly beneath it.
- **The sink run**
Sink 600 × 450 mm (2'-0" × 1'-6"), held 65 mm (2½") off the blind corner so the drainer never fights the wall.
- **The magic corner**
The blind corner cabinet carries a pull-out “magic corner” — drawn on the plan both stowed and swung out, because hardware you cannot see is hardware you will not buy.
- **The hatch**
A 1100 mm (3'-7") serving hatch opens through the wall into the family room — food passes, people don't have to.

07 KITCHEN

standing in it — indicative, drawn from the plan's own geometry

THE WORKING RUN — COUNTERS BOTH SIDES, THE WINDOW OVER THE SINK

indicative illustration — generated from the plan geometry, not a photograph

08 FAMILY ROOM

the west pod — dining behind curved glass

from the working plan — true to scale

- The west pod: 21.3 m² (230 sq ft) behind its curved glass screen, holding the six-seat dining table.
- **The table**
Six seats with the serving hatch directly behind — dinner lands on the table three steps from the hob.
- **The portal**
The pod's open doorway was moved south on the parents' side — Y 4700–5523 — so the walk from their suite lands straight at the table, never around it.
- **The corner units**
Curved corner joinery closes the pod's square corners, echoing the screens — nothing in the two pods ends in a point.
- **Glass roof**
Like the den, the pod's 3665 × 2280 mm (12'-0" × 7'-6") bay carries a glass roof — daylight from above, deep in the plan.

08 FAMILY ROOM

THE SIX-SEAT TABLE, THE SERVING HATCH OPEN IN THE SOUTH WALL

indicative illustration — generated from the plan geometry, not a photograph

09 MUSIC + WORK DEN

the east pod — Karan's

from the working plan — true to scale

- The east pod is Karan's: music and work in 21.3 m² (230 sq ft), behind the same curved glass.
- **The work console**
A long console runs Y 4800–7000 hard against the east screen — 2.2 m (7'-3") of desk. It is why this pod's portal cannot move: the door and the desk share one wall.
- **The drums**
The e-drum kit sits in the south-east corner, as far from both suites as the plan allows.
- **Two recliners**
Side by side, both facing north to the deck and the fountain — 800 × 900 mm (2'-8" × 3'-0") each, with a shared table between.
- **The screen**
Karan's screen carries a 900 mm (3'-0") wood dado with tinted glass over — privacy seated, connection standing.

09 MUSIC + WORK DEN

10 MASTER SUITE — PARENTS

two zones and a pocket of glass

from the working plan — true to scale

- The west wing: 32.5 m² (350 sq ft) in two zones — bed to the north, dressing to the south — split by a sliding partition.
- **The partition**
A joinery block plus a 1332 mm (4'-4") leaf of brown tinted glass. The leaf slides into a 120 mm (5") pocket built into the BACK of the cupboards: shut, two rooms that heat separately; open, one suite. Nothing swings, so nothing fouls the bath's arch.
- **The wall bed**
The grandmother's Murphy bed: a 400 mm (1'-4") deep cabinet that is simply furniture 51 weeks a year — and folds down to a true QUEEN, 1500 × 2000 mm (4'-11" × 6'-7"), when she stays. No nightly unfolding, no sofa-bed compromise.
- **The sliders**
The terrace wall is sliding glass end to end — open, the suite gains the terrace; shut, it is still all view.
- **The bath**
Behind an arched masonry sweep — 1930 mm (6'-4") clear — a curved vanity with a 400 mm (1'-4") bowl, WC and shower.

10 MASTER SUITE — PARENTS

THE DRESSING ZONE — THE MURPHY BED FOLDED DOWN, CUPBOARDS ALONG THE PARTITION

indicative illustration — generated from the plan geometry, not a photograph

11 MASTER SUITE — KARAN

the east wing, mirrored then made his

from the working plan — true to scale

- The east wing mirrors the parents’ — 32.5 m² (350 sq ft) — then diverges in its joinery.
- **The bed**
A king, 1930 × 2032 mm (6’-4” × 6’-8”), its headboard running window jamb to window jamb.
- **The dressing screen**
A wood-dado partition with tinted glass over — same language as the den’s screen, so his two rooms rhyme.
- **The wardrobes**
Two hanging wardrobes of 990 mm (3’-3”) each plus a dresser 750 mm (2’-6”) deep — a dresser is a place to sit at, not to hang in.
- **The terrace**
The same grass, tree and jhoola as the parents’ — see the terraces page.

11 MASTER SUITE — KARAN

OVER THE KING TO THE TERRACE GLASS — HEADBOARD JAMB TO JAMB

indicative illustration — generated from the plan geometry, not a photograph

12 BATHS + SERVICE

every wet room enters through a curve

from the working plan — true to scale

- Three wet rooms, one language: every one enters through a curve, never a flat door in a flat wall.
- **The master baths**
Mirror images at 6.5 m² (69 sq ft): the arched sweep gives 1930 mm (6'-4") clear, the vanity curves with the wall and carries a 400 mm (1'-4") bowl.
- **The guest WC**
Its wall is a quarter-ellipse — the same geometry as the entry apse — with a curved console and 344 mm (1'-2") bowl, a 900 mm (3'-0") square shower, in 3.0 m² (33 sq ft).
- **The pans**
All three WCs are drawn at true size — 680 × 390 mm (2'-3" × 1'-3"), pan and cistern — as is every appliance in the house. What you see is what fits.
- **Service**
Help's room (4.4 m² / 47 sq ft) and the store (2.4 m² / 26 sq ft) sit off the gallery, with their own doors.

12 BATHS + SERVICE

standing in it — indicative, drawn from the plan's own geometry

A MASTER BATH — THE CURVED VANITY, THE SHOWER BEHIND GLASS

indicative illustration — generated from the plan geometry, not a photograph

13 THE TERRACES

a tree outside every bed

from the working plan — true to scale

- Each suite ends in a terrace of 3.7 m² (40 sq ft) — real grass under a high glass roof, one tall tree in the centre line of each, planted in the open air.
- **The tree**
A real tree — frangipani or a short palm, 1.5–2 m (5’–6’-7”) — seen from the bed all year. The terrace roof is high glass: rain never lands, light always does.
- **The jhoola**
A single-seat swing on a 900 mm (3’-0”) frame with 150 mm (6”) clear each side — the terrace’s one piece of furniture.
- **In and out**
The suite’s sliding glass opens the bedroom to the grass: the tree is “outside”, the bed is “inside”, and on a good evening the distinction stops mattering — which is the whole idea of the home.

14 WHAT STAYS TRUE

the rules under the drawing

- **The shell is honest**
The flat came as a bare shell. Every wall in this plan is new, every opening is a gap left in a new wall — nothing is cut into the building.
- **The structure is sacred**
All 14 columns, every beam, all eight shafts, ducts and voids are exactly where the builder left them. An automated check runs on every change and must pass before anything is drawn.
- **Everything is true to size**
Every appliance, fixture and piece of furniture is drawn at its real catalogue size — beds, WCs, recliner footrests included. What you see fitting, fits.
- **One source, two drawings**
This pitch and the architect's DXF are generated from the same source. The pretty version cannot drift from the buildable one.
- **What is still open**
Deck loading (spa, fountain, grass, roof) and the glass roofs need the structural engineer's sign-off — neither changes the layout.

Drawn for the family, August 2026.
